

## ABSTRACT OF THE DISCLOSURE

A condensing apparatus of a washing and drying machine comprising a casing for forming an accommodating space therein; a tub installed in the casing; an air duct of which one end is connected to the tub thus for introducing  
5 air into the tub; a blower fan for blowing air along the air duct; and a heating means for heating air of the air duct before being introduced into the tub, wherein the condensing apparatus comprises: a condensing duct of which one end is connected to a lower region of the tub and another end is upwardly extending; a condensate water supplying duct connected to a lower region of  
10 the condensing duct for supplying condensate water into the condensing duct; and a condensate water dispersing portion provided with a plurality of dispersion holes formed along a circumferential direction of the condensing duct with a certain interval and arranged at an outlet side of the condensate water supplying duct along a flow direction of the condensate water, for dispersedly  
15 dropping condensate water supplied from the condensing water supplying duct.
